Brikk — Admin & custom team plan setup

How to access the admin tab, create custom Agency teams, and handle common scenarios.

Who can access the admin tab

Admin access is hard-coded to a list of "owner" email addresses inside the app. Anyone signing in with one of those emails sees the admin dashboard at **brikk.store/admin**; everyone else is shown an Access Denied screen.

The current owner-email list lives in:

```
app/admin/page.js → const OWNER_EMAILS = [...]
```

To add another admin (for example, a co-founder or contractor), edit that array, commit, and push. The new email gets access on the next Vercel deploy.

How to open the admin tab

1. Sign in at **brikk.store/login** with an owner email.
2. After landing on the Today screen, change the URL to **brikk.store/admin** (there's no link in the app sidebar — admin is intentionally not advertised).
3. You'll see five tabs across the top: Overview, Users, Leads, Deals, Activity.

What each tab shows

Overview

Top-level KPIs: total users, active users (users with at least one lead), total leads/deals, hot-lead count, total commission tracked across the platform, messages sent, and a rough estimate of monthly recurring revenue. Below that, a 'Leads this week' / 'Leads this month' pair, a 'Lead sources' bar chart aggregated across all users, and a temperature breakdown.

Users

Every agent on the platform, with their name, email, brokerage, join date, and counts (leads, deals, total commission). Click any user to drill into their full profile, lead list, and deal list.

Leads

Every lead across every account, filterable by temperature. Each row shows the agent who owns it, the temperature, and when it was created.

Deals

Every active deal across the platform, sorted with the largest commissions visible. Shows the owning agent.

Activity

Recent signups + recently added leads. Use this as your daily heartbeat on how the platform is being used.

Setting up a custom Agency plan from your end

An Agency plan is just a Team plan with the seat count raised and the plan tier flagged as 'agency'. Here's how to set one up when a brokerage signs:

Step 1 — Confirm the deal

- Get the brokerage name, the owner's email, the seat count, and the agreed monthly fee.
- Have the owner sign up at **brikk.store/login** (they pick the password). They should NOT yet pay through the Stripe checkout — you're going to bypass it.
- Once they're signed in, get their user ID from the admin tab → Users → click their name → URL contains the UUID. Or have them tell you what email they used and look them up.

Step 2 — Create their team manually in Supabase

Open Supabase → SQL Editor. Run a query like this (substitute the values in brackets):

```
INSERT INTO teams (name, team_code, plan_tier, owner_id, max_seats, status)
VALUES (
  '[Brokerage name]',
  'TEAM-XXXX-YYYY', -- pick something memorable
  'agency',
  '[Owner UUID]',
  30, -- seat count you agreed on
  'active'
);
```

Then attach the owner to that team:

```
UPDATE profiles
SET team_id = (SELECT id FROM teams WHERE team_code = 'TEAM-XXXX-YYYY'),
    team_role = 'owner'
WHERE id = '[Owner UUID]';
```

Step 3 — Send them their team code

Email the brokerage owner the team code and these instructions for their agents:

Subject: Your Brikk team is live — share this with your agents

Hi [Owner name],

Your Brikk Agency plan is set up. Your team code is **TEAM-XXXX-YYYY**. Share it with your agents and have each of them go to **brikk.store/login**, click **Sign Up**, and click **"+ I have a team code"** at the bottom of the form. They enter the code, finish signup, confirm their email, and they're in — no individual billing.

You can manage your team anytime in **Settings** → **Team**: see who's joined, remove inactive agents, or regenerate the code if it's been shared too widely.

Reply here with any questions.

[Your name]

Step 4 — Bill them outside Stripe (for now)

Agency plans aren't wired into Stripe yet — they're handled manually. Three options:

- **Invoice via Stripe** — Stripe Dashboard → Invoices → New Invoice. Set the amount, send to the owner's email. Stripe handles the payment page.
- **Direct billing via Stripe Subscriptions** — create a custom price in Stripe, attach it to the customer, and they get charged monthly.
- **ACH / wire transfer** — for larger brokerages, often easier than card. Use Mercury or your bank's invoicing tool.

Future: when we wire Stripe webhooks to the teams table, this will be automatic. For now, you're on the honor system.

Common scenarios

An agent on a team wants to leave

They go to Settings → Team → Leave team. They lose access to features tied to the team but their data stays with their account.

The team is at capacity

Either remove inactive members (Settings → Team → Members → Remove) or raise the seat count in Supabase:

```
UPDATE teams SET max_seats = 50 WHERE team_code = 'TEAM-XXXX-YYYY';
```

Code was shared publicly and randoms are joining

Owner goes to Settings → Team → Regenerate code. Old code is dead, new code is generated. Existing members are unaffected; new joiners need the new code.

Brokerage cancels

Mark the team status as cancelled in Supabase — the app will block new joins. Existing members keep their data. After 30 days, you can detach them with a single UPDATE.

```
UPDATE teams SET status = 'cancelled' WHERE team_code = 'TEAM-XXXX-YYYY';
```

Security notes

- Admin access is by email allowlist — anyone with an owner email can see all user data. **Keep that list short.**
- Row-level security on every customer-facing table means agents can't query each other's data even if the app code is buggy.
- Service-role keys (used by the team API) live only in Vercel env vars — never in client code.
- Audit log: every team admin action is currently uncovered — if compliance ever matters, add an **audit_log** table and log create/regenerate/delete actions.
