Brikk — AI video production guide

From script to published Reel in 90 minutes. Tools, scripts, three ready-to-shoot concepts.

What you're building

A 60–90 second walkthrough of Brikk that looks like a polished agency made it. AI handles the voiceover, the on-screen visuals are real screen recordings of your app, and a tight script ties it together. Output: 9:16 vertical for Instagram Reels and TikTok; 16:9 horizontal for the website and YouTube ads.

Total time investment, once you've done it once: roughly 90 minutes for a finished 60-second reel. First time through will take 3–4 hours as you learn the tools.

Tools — the stack that actually works

Role	Tool	Why	Price
AI voiceover	ElevenLabs	Most natural voices on the market. Custom voices.	\$5–22/mo
AI voice (alt)	PlayHT	Cheaper, slightly less natural. Good for volume.	\$15/mo
AI avatar (optional)	HeyGen	If you want a talking head and don't want to be on camera yourself.	\$24–72/mo
Screen recording	Loom or OBS	Loom is faster (browser tool); OBS is free + more control.	Free / \$15/mo
Editing	CapCut	Free, fast, exports Instagram-perfect 9:16. Captions auto-generated.	Free
Editing (alt)	Adobe Premiere / Final Cut	If you already use them. Otherwise stick with CapCut.	\$20/mo / \$300
B-roll / motion graphics	Runway Gen-3	For AI-generated cutaways. Optional polish.	\$15–35/mo
Music	Epidemic Sound	Cleared for commercial use. Massive library.	\$15/mo
Music (free)	YouTube Audio Library	Free. Smaller selection.	Free
Captions	CapCut auto-caption	Built in, accurate, free.	Free

Minimum stack for your first video: ElevenLabs (\$5), Loom (free), CapCut (free). Total: \$5.

The 60-second video — script structure

Every reel follows the same beats. Open the script template in this document and fill in the blanks.

Time	Beat	What's on screen	What you say
0:00–0:03	Hook	Bold text overlay	A stat or a question
0:03–0:10	Problem	Hand-recorded phone, messy CRM	Name the pain in one sentence
0:10–0:35	Demo	Screen recording of Brikk	Walk through ONE feature start to finish

0:35–0:50	Wow	Result in the app	The 'this is why it works' moment
0:50–1:00	CTA	URL on screen	"45 days free. brikk.store."

Step-by-step — your first video, end to end

1. Write the script (15 min)

Write 150–170 words. That's roughly 60 seconds of natural speech. Read it out loud once — if you stumble on any sentence, rewrite it. Spoken language and written language are different.

Example script — 'AI Copilot demo' (162 words):

Three out of four buyers go with the first agent who responds. But the average agent takes 15 hours to follow up.

If you sell real estate, you know exactly why. You have 40 leads, a closing on Friday, and a buyer who needs you on a call right now. Following up with everyone perfectly isn't a willpower problem. It's a time problem.

Watch what we built. This is Brikk. I click Generate Drafts, and AI reads every lead's full context — their temperature, their last conversation, their timeline. Then it writes the next message. I read it. I approve it. The contact is logged.

That's three minutes of work that used to take you an hour. Forty leads instead of two.

\$75 a month. First 45 days are free. No credit card. brikk.store.

2. Generate the voiceover (5 min)

- Sign up at elevenlabs.io. The Starter plan (\$5/mo) is enough for 30 minutes of audio per month — easily 15 videos.
- Click **Voices**. For Brikk, use **Antoni** (warm, professional, US accent) or **Adam** (deeper, more authoritative). Try both with one sentence of your script before committing.
- Click **Text to Speech**. Paste your script. Set stability around 50%, similarity around 75%, style exaggeration low.
- Generate. Listen. If something sounds wrong, adjust punctuation in the script (commas force pauses, ellipses extend them).
- Download as MP3. Save as **brikk-vo-01.mp3**.

3. Record the screen B-roll (15 min)

- Open Brikk in Chrome with realistic test data. Sign in with your test account.
- Open **loom.com**. Start a new recording. Use the screen-only setting (no webcam, no mic — you have the voiceover already).
- Record yourself going through ONE flow: Today screen → Copilot → Generate drafts → Review one → Approve & log.
- Move the cursor deliberately. Slow is better than fast. The viewer needs to follow what's happening.
- Don't worry about it being perfect. You'll cut out the boring parts in editing.
- Download the MP4 from Loom (top-right share menu → Download).

4. Edit in CapCut (30 min)

- Download CapCut (free, capcut.com — desktop or mobile). Create a new project.
- Set the project to **9:16 (1080×1920)** for Instagram Reels.
- Drag in your voiceover MP3. It becomes the timeline anchor.
- Drag in the screen recording. Crop and scale so the key UI is centered for vertical view.
- Trim the screen recording to match the voiceover beats. Voiceover says "I click Generate Drafts" → cut to the moment the button is clicked. Voiceover says "AI reads every lead" → zoom into a lead card.
- Add a **0:00–0:03 text overlay** with your hook: e.g. "78% of buyers pick the first responder." Big white text, Brikk-black background.
- Use the **Auto Captions** feature (Text menu → Auto Captions). Burns in word-by-word captions. Style them: white text, black drop shadow, mid-screen.
- Add background music — drag in from CapCut's free library or Epidemic Sound. Bring the volume down to about 15% so it sits behind the voice.
- Add a 0:50–1:00 CTA: text overlay "45 days free. brikk.store" and your logo (use public/favicon.svg). Hold for 3 seconds.
- Export at 1080×1920, 30fps, MP4. File size should be 10–30 MB.

5. Polish (20 min)

- Watch it on your phone with the sound on. Does the first 2 seconds make you stop scrolling? If not, rework the hook.
- Watch it on your phone with the sound OFF. Do the captions and visuals tell the story? 85% of feed traffic is sound-off.
- Get one outside opinion — a friend, your partner, a fellow agent. Ask them "what does this thing do?" If they can't answer in one sentence, the script needs another pass.

6. Distribute

- **Instagram Reels:** use the 9:16 export. Caption: short, conversational. End with CTA. Hashtags from the Instagram plan doc.
- **YouTube Shorts:** same file, post natively (don't repurpose Reels watermarks).
- **TikTok:** same file. Different audience — be slightly more raw, less polished.
- **Your website:** re-export as 16:9 in CapCut. Embed on brikk.store/demo or the landing hero.
- **Cold email:** upload to Loom or YouTube unlisted, paste link in your day-8 follow-up email.

Three example video concepts to make first

Concept 1 — "The 15-hour problem"

Hook (0:00–0:03): Black screen. Text: "78% of buyers pick the first agent who responds."

Problem (0:03–0:10): Screen recording of a stuffed inbox / phone with 12 missed-call notifications.

Voiceover: "The average agent takes 15 hours to follow up. Most stop after the third try."

Demo (0:10–0:35): Brikk's Today screen. Cursor moves through action items. Voiceover: "Brikk reads your pipeline and tells you exactly who to call. AI drafts the message. You approve."

Wow (0:35–0:50): Slow zoom on a lead card. "Approved · contact logged" badge fades in. Voiceover: "That's three minutes for 40 leads."

CTA (0:50–1:00): White screen. Brikk mark. "45 days free. brikk.store."

Concept 2 — "\$75 vs \$300"

Hook: Two phones side by side. Left phone: "\$300/mo · Lofty." Right phone: "\$75/mo · Brikk."

Demo: Show three features they share — pipeline, AI follow-up, marketing ROI. Then show ONE feature Brikk has that Lofty doesn't — voice-to-CRM.

Wow: Side-by-side total annual cost. Lofty: \$3,600. Brikk: \$900. "Same job. Less money."

CTA: "45 days free. brikk.store."

Concept 3 — "Voice-to-CRM, one take"

Hook: Hand holding phone. Text overlay: "What if your CRM just listened?"

Action: Tap the floating mic in Brikk. Speak naturally — "Just left a showing with Sarah Mitchell. She loved the house on Elm. Wants to put in an offer Thursday. She's pre-approved at \$475."

Reveal: Cut to the AI extraction screen. Fields populate live: lead matched to Sarah Mitchell, price updated, notes added, stage changed to Offer Submitted.

Wow: "You said it. Brikk did it."

CTA: "\$75 a month. 45 days free. brikk.store."

Quality tells — what makes ads look pro vs amateur

Amateur tell	How to fix
Voice sounds robotic	Use ElevenLabs (not Google or Apple's built-in). Add commas for natural pauses.
Visuals are too fast	Hold each visual 1.5–2 seconds minimum. The viewer needs time to read.
No captions	Always add captions. CapCut auto-captions are free and accurate.
Cursor moves erratically	Re-record screen footage at half speed, speed up 2× in editing.
No music	Always add background music at 15–20% volume. Silence reads as cheap.
Captions block the action	Position captions at the bottom third only, never over the UI.
Brand color drift	Use only Brikk's palette — #1A1A18, #FAFAF9, #16803C. Don't add random colors.
Logo flash at the end	Show the logo for 3 full seconds with a URL. Half-second flashes don't register.

Volume plan — your first 30 days of video

Aim for two videos per week — one demo, one stat-driven. Eight videos in your first month is enough to test what works before you commit to a longer content calendar.

- Week 1: Concept 1 (the 15-hour problem) + a behind-the-scenes "why I built Brikk" reel.
- Week 2: Concept 2 (\$75 vs \$300) + an agent-pain reel ("You forgot to follow up. Here's what they did.").

-
- Week 3: Concept 3 (voice-to-CRM) + a marketing-ROI reel ("Zillow vs Referrals — which actually closes?").
 - Week 4: Pick the highest-performing concept from weeks 1–3 and remake it with a different hook.

Repurposing — one shoot, six pieces of content

Every 60-second video should become at least six pieces of content with light editing:

- **9:16 Reel** for Instagram, TikTok, YouTube Shorts.
- **16:9 horizontal** for the website hero and YouTube.
- **Three 15-second cutdowns** for ad testing (try three different hooks against the same demo footage).
- **Static carousel** for Instagram — screenshot key moments from the video, write captions for each.
- **Audio-only clip** for a podcast feed (if you have one) or to embed on the marketing site.
- **Email GIF** — export a 6-second silent loop of the most compelling moment, embed in cold emails.
